To connect to a Mac in Luddy room 0119, first go to iuanyware.iu.edu and log in.

Once logged in, you will be presented with this screen:

You can click the link to use the light version in a browser window or click the “Detect Receiver” button to open the Citrix app installed on your computer. If the Citrix app is not already installed, the link will provide you with instructions on how to get it.

Once in the IUAnyware Light Version or the Citrix app you can search for “Remote Desktop” to find the Microsoft Remote Desktop Connection app. Open it, wait for the application to launch, then type in your assigned IP address, and click “Connect.” You should be presented with a certificate notice. Choose “yes” to proceed.

The next screen is asking for login credentials as if you were in front of the computer. Log in using your IU credentials. A remote desktop session should start after a few moments of initialization.

Once logged in you may need to change the screen resolution. You can do that in this menu in the top-right corner:
In order to disconnect, you can log out of the remote session computer, close your browser or Citrix app, or close the Remote Desktop application in the browser or Citrix app. Only one user can be logged in to a computer at a time.
