How do I get detailed information about my Linux accounts?

Scope

This document provides information about accounts on the Unified Linux Systems managed by the Luddy School of Informatics, Computing, and Engineering. There are many other standalone Linux systems in the school that are not part of the unified configuration and, therefore, this document does not apply to accounts on those systems. If you have any questions about Linux systems within the school, please contact us.

Linux Account Information

To get detailed information about your existing unified Linux accounts (including account status, disk quotas, group membership, email forwarding, web pages, and disk storage options), you can use the Account Information CGI Page. This page provides real-time information about your Linux account and is accessible at:

https://help.luddy.indiana.edu/ITG/account/accountinfo.cgi

You will log in using your IU ADS username and passphrase

Linux System Availability

Information about the available unified Linux systems is available here:

What Linux systems are available?
